Defect #	Defect Description	Defect Severity	Test Case No. Or Description
1	Login in multiple times repeatedly corrupts user in the database	1	After corruption, can no longer use any commands
2	Instructions for using byop mood are not included	3	Bad for usability testing since you don't know what to type to trigger the command
3	Playlist returned from top playlist can be difficult to understand / decipher /read	3	It is given back in a comma separated list, which can be hard to read from messenger's app
4	Responses get buffered and delayed when spammed with commands	2	After multiple commands rapidly, will respond with a huge chunk of responses and will not let the user respond after until all responses have been outputted
5	If two users input the same command concurrently, the bot may give one user's returned playlist to the other	1	Security issue, as bot gives info to unwanted user
6	If user gets corrupted in database from defect 1, bot cannot recover automatically. Requires manual	1	Recovery issue as if a user gets corrupted, requires manual action

	deletion of previous user and reapproval/login
